

## 5.5GHz Panel 16 dBi Antenna

### 16 dBi Panel Antenna with 5.5GHz Frequency

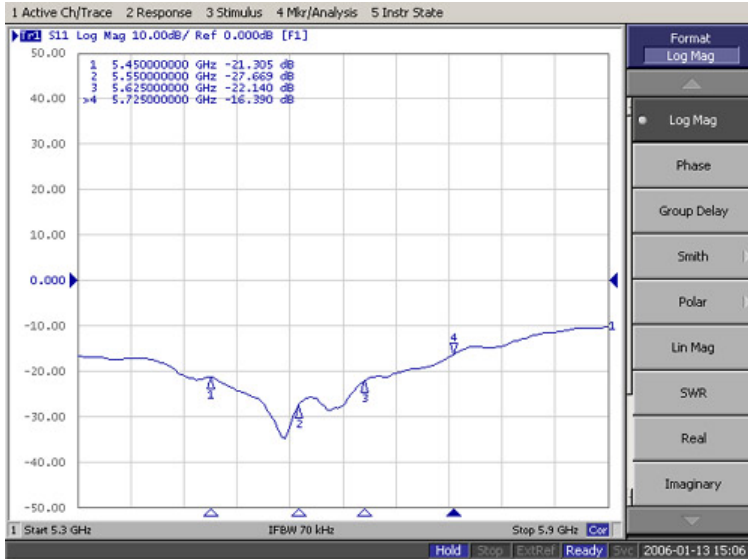

This panel antenna delivers extended access point range in a single floor environment ideally positioned in the corner of a building. It functions from point-to-point so that you can wirelessly connect LANs between the buildings in a campus-type environment. It provides multiform transmission when placed on a wall, as the higher power output extends the range through typical flooring materials
