

Power Over Ethernet

POE 04

The POE adapter system is available in either 12V @ 1A or 5V @ 2.4A precision regulated outputs. The devices have proprietary sensing algorithms which detect an overload or short circuit condition and shut down the supply to prevent equipment damage. The power supply unit is auto-ranging 90-264VAC 50/60Hz and has a removable AC cord for universal compatibility. The units are rated for operation at -10 to +60 deg C and up to 90% humidity, so they perform reliably in outdoor weatherproof enclosures. The 5/12V DC power plug is a standard 5.5 x 2.1mm DC power adapter. They also comply with IEEE 802.3af POE Standard Mode B. The units are sold as a 12V or 5V set (Model Numbers: POE-48i12s and POE-48i5s) or can be purchased separately.
